

CUHK Research Poster Template

First Author, Second Author, Senior Author

Introduction

Research problem, motivation, and gap. Contributions, hypotheses, and expected scientific impact.

Methodology

Problem formulation, data setting, model components, and evaluation protocol.

Theoretical Analysis

Proposition: baseline law
Prior result or baseline mechanism:
$$\mathcal{L}_0(\theta) = \mathbb{E}_{(x,y) \sim \mathcal{D}_0}[\ell(f_\theta(x), y)].$$

Theorem: main result
Primary theorem, bound, or convergence statement:
$$\mathcal{R}(\hat{h}) - \mathcal{R}(h^*) \leq C \sqrt{\frac{\log(1/\delta)}{n}}.$$

Main assumptions and implication.

Corollary: practical implication
Assumptions, limiting cases, and observable consequences.

For more methodology and theoretical details, please refer to the full paper.

Primary finding.
Key mechanism.
Core evidence.
Main implication.
Boundary condition.
Reproducible detail.

Results

Main comparison, primary metric, and statistical uncertainty.

Result Figure

Ablation Study

Component analysis, robustness check, and sensitivity trend.

Discussion

Interpretation, limitations, and future work.

For additional experimental results, please refer to the full paper.
